and the U.S. Green Building Council

Notes

Colors and textures have been matched as closely as possible. Paper and ink limitations as well as influence of heat and light account for differences from actual coatings. To aid in final product selection, please contact your local TIGER Drylac office for a powder coated q-panel of the product of your choice.

Datasheets and MSD Sheets are periodically updated datasheets showing cure parameters, test results, pretreatment information and more are available for all products in this chart. Please contact your local TIGER Drylac office for the latest version or download from our website.

TIGER Drylac U.S.A., Inc. Product Number Matrix

Series 09	Interior only	Polyester-Epoxy Blend (Hybrid)
Series 16	Exterior and Interior	Acrylic Hybrid
Series 38	Exterior and Interior	Super Durable Polyester

Series 49	Exterior and Interior	TGIC Polyester
Series 58	Exterior and Interior	TGIC-Free Super Durable Polyester (available to approved applicators only)
Series 59	Exterior and Interior	TGIC-Free Polyester
Series 69	Interior only	Epoxy
Series 75	Exterior and Interior	Fluoropolymer (available to approved applicators only)
Series 89	Interior only	Polyester-Epoxy Blend (Hybrid) Low/Fast Cure

Electrostatic Dissipative powder coatings allow for the controlled dissipation of static buildup, or prevent the buildup of a high charge in applications like computer hoods and electronic cabinetry. Resistivity measures in the lab measures 10^6 . Custom colors are possible in the dark grey to black color range.

FDA Compliant powder coatings are conforming with the raw material requirements of the Food and Drug Administration's requirements for 21 CFR 175.300 "Resinous and Polymeric Coatings." This regulation deals with coatings that may be safely used as a food-contact surface of articles intended for use in producing, manufacturing, packing, packaging, treating, transporting or holding food, when the coating is applied as continuous film over a metal substrate, or the coating is intended for repeated use and is applied to any suitable substrate as a continuous film or enamel that serves as a functional barrier between the food and the substrate.

The powder coatings also conform to the requirements of 21 CFR 178.3297 "Colorants for Polymers." Please note: TIGER Drylac FDA Compliant powder coatings "conform" and "comply" with the above requirements. We have not conducted tests, but rather rely on the suppliers of raw materials to provide us with the appropriate documentation. It is the responsibility of our customers to test the applied part confirming as "FDA Approved," as may be required by their customers.

Additional semigloss, matte and various textured products are available in our Exterior product lines. Please request color charts from you local TIGER Drylac office or review the choices on our website.

Custom Colors are available with a 220 lbs. minimum order quantity and have quick turnaround times.

Gloss Levels are measured according to Gardner ASTM D523/60 degree angle. Gloss levels on fine and rough textures cannot be accurately measured.
